

e-telex™ is a **Network telex™** product which allows you to send telex messages from your PC.

When you need to send a telex, save time by sending it directly from your PC as an Internet e-mail. Now sending a telex is as simple as sending an e-mail with full legal document confirmation.

Overview

There is no need to use dedicated telex equipment. Simply use your existing e-mail software, such as MS Outlook®, Lotus cc:Mail® and Notes® or any Internet mail package, and your existing Internet e-mail connection.

If you can send Internet e-mail, you can use this service. Internet Telex is available worldwide and on all operating systems including Windows, DOS and Unix.

Easy to use

No new software needs to be installed on your PC. Therefore, there is no training required, so you can take full advantage of the service immediately after registration. Simply address the e-mail to the appropriate telex number at **e-telex™**'s special e-mail address, and we'll do the rest. The address can be stored in your standard e-mail address book, so next time you want to send a telex to the same number, you can select it quickly and easily. This saves you even more time on frequently used telex numbers.

You simply type your message into the body of an e-mail and it is automatically converted into a telex.

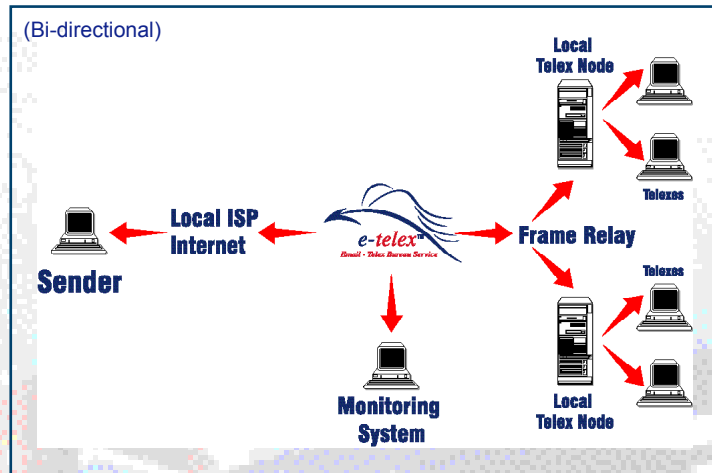

You can send messages to multiple telex numbers or a combination of telex, e-mail and fax addresses (text only for telex addresses).

Save time and money

Once you have sent the message, we take over. The service leaves your PC free for you to continue working. The **e-telex™** global network receives the e-mail from the Internet, converts the text into a telex, and sends it to the telex number or numbers. Busy numbers are automatically re-tried, saving you time and reducing frustration.

You will know when your message has been delivered, as we send a confirmation of delivery direct to your inbox, or a non-delivery notification if the message has been cancelled. Our Internet Telex service requires no investment, so all you need to do is register to use the service.

e-telex™ offer very competitive delivery rates that will also save you more money and there is no disruption to your business. We offer superior support through our network of regional offices and global partners fully backed by our 24hr international service center in London. Network Telex supply telex solutions in over 165 countries.

Send telexes from your Internet e-mail package easily and save time and money when sending telexes. There is no new software or hardware required

Reports to keep you informed

As well as the confirmation sent immediately after delivery or cancellation, a variety of reports, sent to your Internet e-mail address, are available to keep you informed.

Scheduled reports are available daily, weekly or both, as requested. These reports list all messages, with their status of delivered or cancelled, which have been sent over the period.

Status on demand reports can be requested by e-mail or fax whenever you wish for updates on today's or yesterday's messages. Registering for **e-telex™** will also allow full access to our **e-fax™** service, providing low cost International fax transmission including attachments if required.
